InstaLay 'Peel & Stick' - ideal for use below Luxury Vinyl Tiles

During a recent installation, InstaLay, the Peel & Stick rubber crumb acoustic underlay, proved itself to be perfect for LVTs with a click joint system. It provided various benefits in terms of speed of installation and associated costs.

The sub-floor was in a poor condition and would normally have required a screed before installation, adding to the cost and delaying the job while the screed dried overnight. However, with no sub-floor preparation, the InstaLay 30lg (3mm low grab) adhesive system was loose laid rather than being bonded to the sub-floor before the 'Adore' LVT click system was laid normally.

As each luxury vinyl tile was clicked into position, the release film was peeled back to reveal InstaLay's adhesive membrane which secured the planks in place. At the same time InstaLay overcame the sub-floor imperfections, none of which 'grinned' through to the finished floor surface.

The self-adhesive InstaLay system offers numerous benefits over traditional underlays, particularly when used beneath vinyl planks:

- Unique Peel & Stick construction that considerably reduces installation times and costs
- Significantly reduces sub-floor preparation times as screeds or smoothing compounds are often not required
- The InstaLay does not need to be bonded to the sub-floor
- The adhesive membrane enhances (supports and strengthens) the click joint
- Provides a cushioned layer, giving underfoot comfort and anti-fatigue characteristics
- Provides excellent acoustic performance (particularly impact noise reduction through the system)
- Minimises the risk of sub-floor imperfections 'grinning' through the vinyl surface
- Extremely fitter friendly, enabling LVT's to be repositioned, if necessary
- Quick, clean and easy to work with – no messy adhesives in contact with the floor covering

- Durable, long lasting, hygienic and will not collapse over time.
- Can be used with underfloor heating systems
- Guaranteed for 10 years
