## Orthopaedic Center has new anti-fatigue flooring rapidly installed

Products used: **InstaLay 30lg**  
(low grab adhesive)  
371m<sup>2</sup> (4,000sq ft)

Floor finish: **Mohawk Flexlok carpet tiles**

Flooring contractor: **On The Surface Flooring**

When the Sequoia Orthopaedic Center in Walnut Creek, California, decided to have new flooring installed in its downstairs rehabilitation area the flooring contractor decided to use the self-adhesive acoustic installation system, InstaLay.

Having removed the existing carpet tiles, the InstaLay was simply loose laid after minimal sub-floor preparation. As the release film was removed the new carpet tiles were positioned on InstaLay's adhesive membrane and pressed into place. With no messy wet adhesives the installation was quick, clean and easy and the new flooring could be walked on immediately.

InstaLay also provided various additional benefits:-

- Its unique rubber crumb construction provided Important anti-fatigue properties and greater underfoot comfort.
- With the full installation completed in just 16 hours the rehab center experienced minimal down time.
- Manufactured from environmentally friendly recycled rubber crumb.
- It is hygienic, resistant to decay and has low VOC's.
- It provides long-term stability, performance and durability.

Both the Center management and the flooring contractor were impressed by the speed and ease of installation as well as the look and feel of the new finished floor.
