Quick, clean and economical replacement of school hall floor

Products used: **InstaLay 25hg (high grab adhesive)**
300m² (3,200 sq ft)

Floor finish: **Luxury Vinyl Tiles**

Distributor: **Home Foundations**

Installer: **Simply Floors**

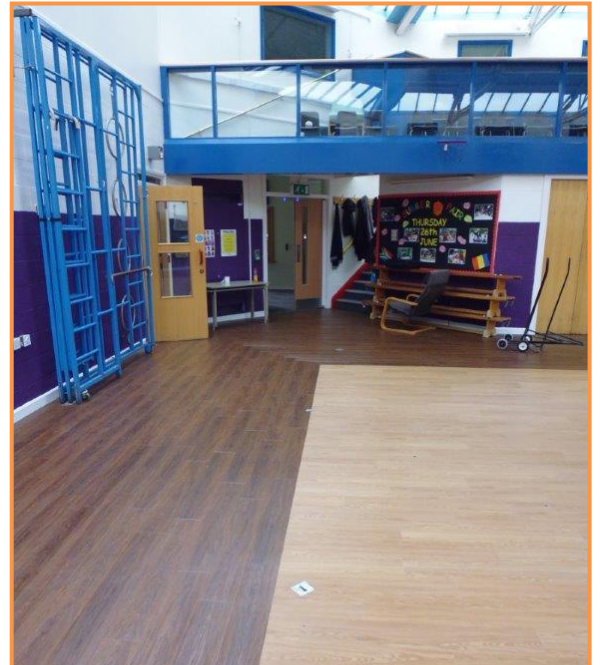

A school in Blackburn, UK, required new flooring for its main multi-purpose hall. Normally its existing Granwood floor would have had to be totally removed and the sub-floor screeded, making the total cost prohibitive. However, by using InstaLay these problems were easily overcome as this self-adhesive flooring installation system was simply loose laid over the existing floor, saving significant time and money.

The InstaLay 25hg (2.5mm high grab) was laid over the hall floor and, as the release film was removed, the LVTs were simply positioned and bonded into place by the adhesive membrane. The installation was very quick and clean and extremely cost-effective with the hall back in use much sooner than with traditional installation methods. Furthermore InstaLay also created a point elastic floor that was perfect for the school hall as it is used for sports activities.

InstaLay 25hg has been designed specifically for the installation of 2mm or 2.5mm LVT's and woven vinyl tiles. While still manufactured using recycled rubber crumb, it is firmer and provides far greater support for LVT's in order to provide an excellent finished floor while significantly reducing the possibility of point load indentations.

InstaLay offers many benefits including:

- It is loose laid directly to the sub-floor and masks minor surface irregularities.
- Installation, with no messy wet adhesives, is significantly quicker, cleaner and more economical.
- Manufactured from recycled rubber crumb, it gives non-collapsing support for the life of the floor.
- It can be walked on immediately after the floor covering is installed.
