

MagTab MT4

INSTALLATION INSTRUCTIONS

Magnetic/self-adhesive tab system for use with standard loose lay vinyl tiles and carpet tiles

Domestic, retail and commercial use
Manufactured using recycled rubber crumb
MagTab Size: 100mm x 100mm x 0.5mm (4" x 4" x 0.020")

Ezy-Install, MagTab

Magnetic on one side and self-adhesive on the other, MagTabs work by locking tiles tightly together to create the next generation in "floating floor" technology.

MagTabs affix to any magnetically receptive floor such as metal raised access floors or the Ezy-Install magnetically receptive acoustic underlay system. Carpet tiles and ≥4mm vinyl products are simply secured in place using the MagTabs which grip strongly to the magnetically receptive substrate, in both horizontal and vertical directions.

The following is a guide on how to install MagTabs with either carpet tiles or ≥4mm vinyl tiles in various configurations.

1. Preparation

No specific additional preparation is required for MagTabs – prepare any sub floors in accordance with standard requirements. For use with Ezy-Install, please follow the separate installation instructions for this dry laid acoustic system.

2. MagTab Application

Adhere one corner of carpet or vinyl tile to cover one quarter of the adhesive side of the MagTab. Repeat with 3 other tiles such that the MagTab is entirely covered.

3. MagTab Configurations

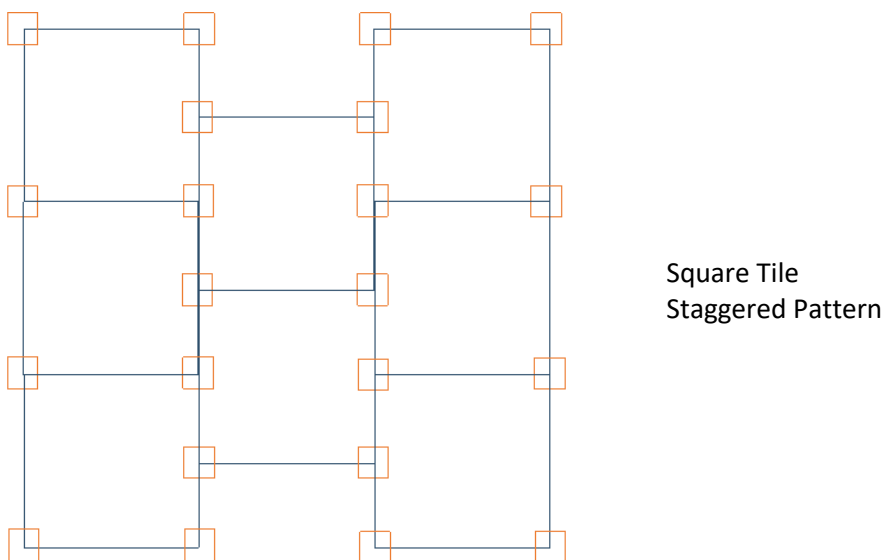

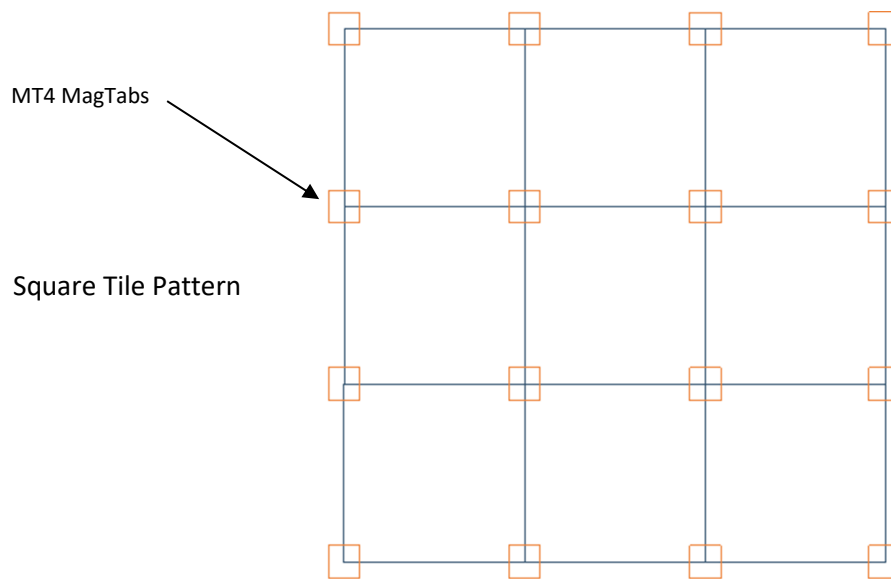

As a guide, the MagTabs should be placed wherever a tile meets another as shown in the following diagrams. During application, ensure that all tiles are in tight contact with each other with no gaps. Where it has been necessary to cut tiles, apply a MagTab under every tile corner/edge.
