

INNOV8 FLO8RS

TILE

Unique Tile Solution

The ceramic tiles, which have a 2.0mm cork backing, are simply installed next to each other – without adhesive – and find their exact position due to the 1.5mm all-round overlap of cork backing. The resulting 3mm wide joint between the tiles can then be grouted immediately with a flexible dispersion grout or flexible coloured sealant grout.

It can be installed using Instalay 25HG or alternatively can be supplied with our **MAGNAFLOOR** magnetic backing to be installed direct to metal raised access flooring or floating on Ezy-Install magnetic flooring underlay.

Advantages of Tile

PRECISE POSITIONING

Loose laid and exact positioning due to the 1.5mm perimeter overlap cork backing creating a 3mm grout line.

FAST INSTALLATION

Simplifies the process of installing tiles without the time consuming requirement for adhesive and drying times. Installation is completed quickly.

EASY TO TO REPLACE

Tiles are extremely durable, however this system allows for easy replacement of any damaged tiles without any sub-floor damage. Easy removal from leased buildings

SILENT UNDERFOOT

Combination of tile and cork backing provides a hardwearing floor easy maintained finish with the advantages of the cork backing providing both thermal and sound insulation.
